

**Figure S2**  
**Trimmed means and significant pairwise post-hoc differences of selected Conners' parent scores in probands (n=1068) and siblings (n=1446).**

Notes: Figures show trimmed means per site in ascending order. Horizontal lines above the bars indicate subgroups of significant pairwise differences. Each site indicated by a small vertical line at the left side of the double slash (//) significantly differs from each site indicated by a vertical line on the right side of the double slash, defined as non-overlapping 95% familywise confidence intervals. For centre abbreviations see text.
