

Synthesis of nanoparticles  
in the gas phase  
for functional applications

Frank Einar Kruis

# Synthesis of nanoparticles in the gas phase for functional applications

Vom Fachbereich Elektrotechnik der

Gerhard-Mercator-Universität Duisburg

Zur Erlangung der Lehrbefähigung im Lehrgebiet

## Prozeßtechnik nanostrukturierter Materialien

genehmigte Habilitationsschrift

von

Dr.-Ing. Frank Einar Kruis

aus

Bergen op Zoom (Niederlande)

# Table of Contents

<b>1. Introduction</b>	<b>1</b>
<b>2. Electronic, optical and magnetic applications</b>	<b>7</b>
2.1 Microelectronic and optoelectronic applications of zero-dimensional structures (quantum dots)	7
2.2 Luminescent nanocrystalline silicon and other materials	11
2.3 Gas sensors	11
2.4 Resistors and varistors	12
2.5 Conducting films	13
2.6 Capacitive materials	14
2.7 High-temperature superconductors (HTS)	14
2.8 Thermoelectric materials	15
2.9 Optical materials	15
2.10 Magnetic materials	16
2.11 Conclusions: Control parameters for properties of functional applications	18
<b>3. Synthesis methods in the gas phase</b>	<b>19</b>
3.1 Processes based on homogeneous nucleation in the gas phase	19
3.1.1 Furnace flow reactors	21
3.1.2 Laser reactors	21
3.1.3 Laser vaporization of solids	22
3.1.4 Flame reactors	22
3.1.5 Plasma reactors	23
3.1.6 Spark source and exploding wire	23
3.1.7 Sputtering	24
3.1.8 Inert gas condensation	24
3.1.9 Expansion-cooling	25
3.2 Laser ablation of solids	26
3.3 Electropray systems	26
3.4 Spray pyrolysis	27
3.5 Conclusions: Processes suitable for functional applications	28

<b>4. Physical phenomena in gas-phase synthesis</b>	<b>29</b>
4.1 Particle formation by nucleation, condensation and coagulation: application to synthesis in tube furnaces	30
4.1.1 Theory	31
4.1.2 Results and discussion	33
4.2 Coagulation and aggregation: a Monte Carlo simulation	36
4.2.1 Direct Simulation Monte Carlo methods	38
4.2.2 A Fast DSMC method	41
4.2.3 Comparison with theoretical solutions for aggregation	43
4.2.4 Comparison with numerical solutions for coagulation	48
4.2.5 Case study 1: Chemical reaction in coagulating droplets (microreactors)	50
4.2.6 Case study 2: Coating of particles with smaller particles by aggregation	52
4.3 Mixing by means of aggregation of charged particles	54
4.3.1 Theory of bipolar aggregation	56
4.3.2 Simulation of aggregation of charged aerosols for mixing purposes	58
4.3.3 Results	60
4.4 Conclusions: Mechanisms relevant for gas-phase synthesis	63
<b>5. Review of synthesis in the gas phase for functional applications</b>	<b>65</b>
5.1 Synthesis for microelectronic and optoelectronic applications of zero-dimensional structures (quantum dots)	65
5.2 Synthesis of luminescent nanocrystalline silicon	67
5.3 Fabrication of gas sensors	69
5.4 Fabrication of conducting films	74
5.5 Synthesis of high-temperature superconductors (HTS)	74
5.6 Synthesis of magnetic materials	75
5.7 Conclusions: Process requirements for selected functional applications	76
<b>6. Controlling nanoparticle behaviour by use of electrical Effects</b>	<b>79</b>
6.1 Nanoparticle charging using a twin Hewitt charger	80
6.1.1 Experimental setup	81
6.1.1.1 The twin Hewitt charger	81
6.1.1.2 Setup for measuring charging efficiencies	82

6.1.2 Ion concentration in the charging zone	84
6.1.3 Charging efficiency	87
6.1.3.1 Effects of frequency and electrical potential	87
6.1.3.2 Effects of length of charging zone and residence time	90
6.1.4 Particle losses in the charging zone	93
6.1.5 Discussion	94
6.2 Differential mobility analysis, with outlook at lower pressures	95
6.3 An electrostatic precipitator suited for investigation of thin nanoparticle films	105
6.4 Conclusions: Instrumentation for controlling nanoparticle behavior	107
<b>7. Synthesis of PbS and SnO<sub>x</sub> nanoparticles for functional applications</b>	<b>109</b>
7.1 Synthesis of size-classified PbS nanoparticles in the gas phase	110
7.1.1 Experiments	111
7.1.2 Analysis of evaporation and sintering mechanisms of PbS	120
7.2 Synthesis of size-classified SnO <sub>x</sub> nanoparticles in the gas phase for gas-sensing applications	124
7.2.1 Experimental set-up	125
7.2.2 Results of structural and electrical characterization	125
7.3 Quantum confinement in size-classified PbS nanoparticles	133
7.3.1 Experimental methods	133
7.3.2 Results and discussion	134
7.4 Experimental investigation of synthesis of tailored composite nanoparticles in the gas phase	137
7.4.1 Experimental methods	138
7.4.2 Results and discussion	139
7.5 Conclusions: Synthesis of PbS and SnO <sub>x</sub> nanoparticles for functional applications	144
<b>8. Conclusions</b>	<b>145</b>
